

# Vertiv™ Liebert® SiteScan™ Web

## Release Notes

VERSION 8, AUGUST 2021

### 1. Feature Improvements

This version of Vertiv™ Liebert® SiteScan™ Web includes the following new feature improvements.

#### Version 8 Improvements

FEATURE	IMPROVEMENT
Security Enhancements	<ul style="list-style-type: none"><li>• Apache Tomcat web server has been upgraded to v9.0.x and TLS 1.3.</li><li>• The Vertiv™ Liebert® SiteScan™ Web application has been upgraded to OpenJDK Java 11 LTS.</li></ul>
New Manual Command to View Security Settings	Entering <b>sreview</b> , the new manual command, displays the application installation's security best practices compliance data. Included are web server security settings, SSL certificate details, email security settings, password policy and the latest software updates. See Manual Commands for details.
Connections	You may select a network connection in a new table on the <i>System Configuration</i> tree - <i>Connections</i> - <i>Configure</i> tab, without having to go to the <i>View</i> tab.
Alarm Notification Improvement	When using location-dependent security, users only receive alarms for locations they may access.
Source Trees	You may use the Source Tree Manager in the Vertiv™ Liebert® SiteScan™ Web interface to build up to 20 source trees. You may build predefined source trees or create your own custom source trees.
Icons	Added new icons in the navigation trees for routers, devices, drivers and equipment.
Legacy Autopilot	The legacy autopilot feature has been removed from the Vertiv™ Liebert® SiteScan™ Web application.
