

Vertiv™ Next Connect

Managing large fleets of critical infrastructure devices is time-consuming and error-prone, especially when handling configuration changes and firmware updates manually. Logging into each device individually slows IT and Operations teams and increases operational costs as businesses scale.

Vertiv™ Next Connect automates these tasks, eliminating manual effort, reducing errors, and freeing technicians to focus on higher-value work. This paper highlights the productivity gains and cost savings demonstrated through internal testing.

Transform hours into minutes

How a Major Customer Achieved
up to 98% Time Savings in UPS Management

The challenge

Imagine manually updating 400+ UPS devices,
taking 8 hours of valuable IT time

Vertiv™ Next Connect

Bulk push configuration

UPS “Startup No Battery” setting

Download and modify Vertiv provided
sample configuration

One-click bulk configuration deployment

Update 400+ devices in minutes,
not hours

Benefits

Exclusive Fleet Management for
Vertiv devices

Up to 98% reduction in deployment time

Reduced downtime risk
