1 Scope

This document provides the monitoring data point lists for Vertiv™ Liebert® Thermal Management Units running the V1A SW application. The Vertiv units that are covered by this monitoring manual are:

1. Vertiv™ Liebert® PDX with Vertiv™ Liebert® iCOM™ 3 controller
2. Vertiv™ Liebert® PCW with Liebert® iCOM™ 3 controller

This page intentionally left blank

2 Monitoring Protocols

All the monitoring protocols provided are over IP through a dedicated Ethernet port, that is physically disconnected from the rest of the other controller interfaces and communicating via serial RS485 protocol with the microprocessor.

- Default IP Address of the monitoring port: 192.168.254.200

The web site is available at that address. At the first access the user is guided by a “First Boot Access” wizard that forces the creation of the web user accounts.

The following standard monitoring protocols are made available together in parallel:

- Modbus TCP/IP
 - Port 502
 - Default address: 1
- BACnet IP v1.14
 - UDP Port 47808
 - Default address: 1
 - Default device name: NHES1
- SNMP v2c
 - UDP Port 161
 - R/W community: “private”
 - RO community: “public”

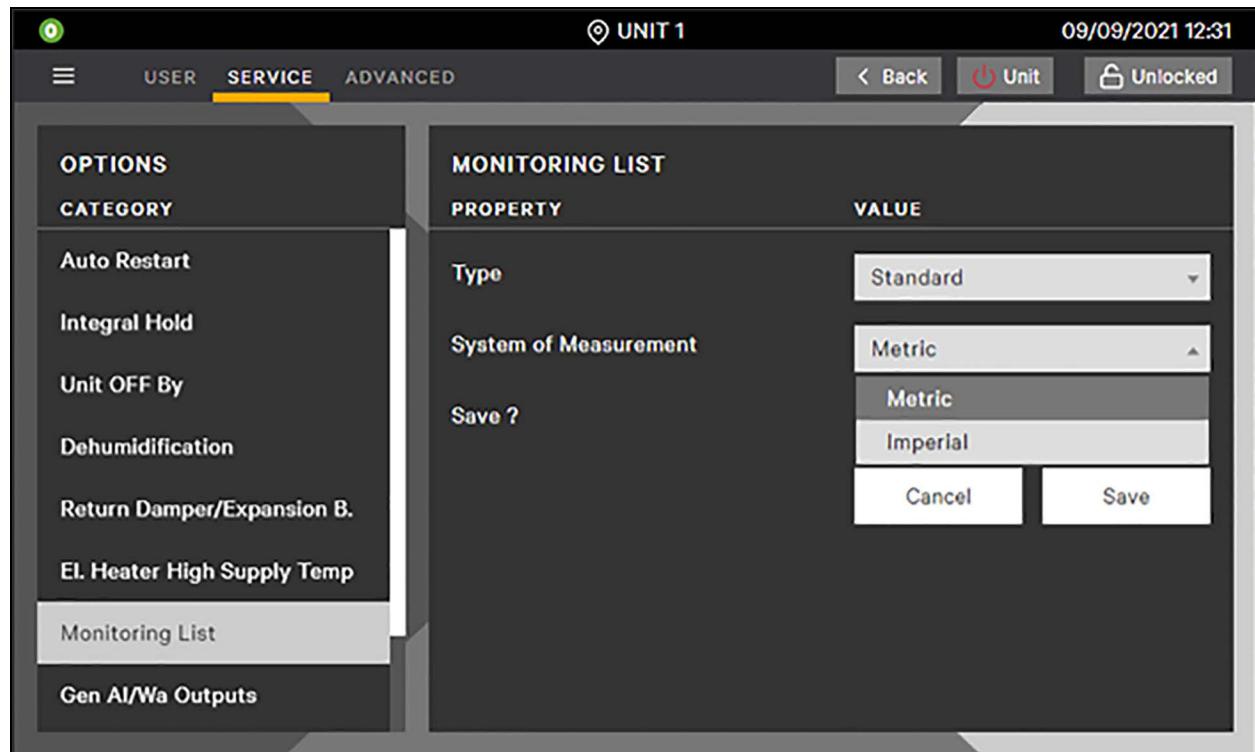

The last column on every data points table reports the SW version from which the specific data point is made available.

3 Unit of Measurement System

It is possible to select the system of measurement for the parameters that are made available on the monitoring protocols. The selection can be done on the HMI at the page Service/Options/Monitoring List or via BMS (see data point “Monitoring System of Measurement”). See **Figure 3.1** below.

4.2 Ethernet Connection on Vertiv™ Liebert® iCOM™ 3 Small

Figure 4.2 Monitoring Port

NOTE: See the “Vertiv iCOM3 Monitoring Port Configuration UM-EN-EMEA” manual for further info about how to upload and activate a usable monitoring model into the monitoring port of a Liebert® iCOM™ 3 controller.

4.3 Networking

The monitoring port must not be connected in the same network of the Vertiv™ Liebert® iCOM™ 3 boards, in order to separate completely the monitoring from the Teamwork local network. The Liebert® iCOM™ 3 Teamwork port shall not be used for monitoring or management purposes by the customer since it is reserved for authorized service.

6 BACnet

6.1 BACnet Implementation

The monitoring port features the following BACnet implementation on protocol rev. 1.14:

BACnet Standardized Device Profile: BACnet Application Specific Controller (B-ASC)

Building Blocks Supported:

DS-COV-B	DS-RP-A	DS-RP-B	DS-WP-A	DS-WP-B	DS-RPM-A	DS-RPM-B
DS-WPM-A	DS-WPM-B	DM-DDB-A	DM-DDB-B	DM-DOB-B	DM-DCC-B	

Segmentation Capability:

Able to transmit segmented messages Window Size: 16

Able to receive segmented messages Window Size: 16

Table 6.1 Standard Object Types Supported

Device	Analog Input (AI)
Analog Output (AO)	Analog Value (AV)
Binary Input (BI)	Binary Output (BO)
Binary Value (BV)	MultiState Input (MSI)
MultiState Output (MSO)	MultiState Value (MSV)
Positive Integer Value (PIV)	Integer Value (IV)

Data Link Layer Options:

BACnet IP

BACnet IP, Foreign Device

Character Sets Supported: ISO 10646 (UTF-8)

Network Security Options: Non-secure Device - is capable of operating without BACnet Network Security.

8 FAQs

The aim of this chapter is to collect a list of possible questions/issues directed primarily to the Vertiv service technical support team.

8.1 General FAQs

Question/Issue	Solution
Are the three monitoring protocols available simultaneously?	Yes they are.

8.2 Modbus Related FAQs

Question/Issue	Solution
Is Multi-Master supported?	Yes it is.
Is serial connection RS485 available?	Not directly, but it is possible to connect an ETH/RS485 modbus converter like Moxa MGate 3180 (code 276989).

8.3 SNMP Related FAQs

Question/Issue	Solution
Is the SNMP compatible with v1?	Yes it is.
Is the SNMP v3 available?	No it is not.
Is there a MIB available?	Yes, it comes bundled with the documentation.

8.4 BACnet Related FAQs

Question/Issue	Solution
Does the monitoring port feature the official BACnet certification?	Yes, it is BTL certified.
