Do you need to solve an emerging data center requirement at your company? That’s relatively easy if you can pick an off-the-shelf approach or a standardized product offering. But what if you can’t?

For micro data centers and server rooms, that’s a challenge. Whatever your needs are, you know they’re special, not necessarily well-served by off-the-shelf offerings. You’re on the lookout for a flexible, scalable solution that breaks through existing limitations, achieves density goals that were unimaginable a few years ago, and can be implemented in weeks instead of months.

We all depend on a world where technology always works. At Vertiv global solutions, that’s what we deliver.

Integrating your unique requirements into our simplified, tailored designs based on standard building blocks, we create an unparalleled, global capability to help you meet your goals. Whether one micro data center or a thousand, you can trust us to maximize your efficiency and optimize your performance.
Leveraging our SmartRow™ DCR, SmartRow DCX, and SmartMod™ product families, our global solutions team gives you solutions that are small in footprint but powerful in compute capacity.

Whether you need supplemental data center capacity, remote data centers, or capacity for disaster recovery, Micro data centers at Vertiv give you an all-in-one solution, combining power, cooling, monitoring and racks — that are built for your unique expectations and constraints. We can give you a micro-modular data center that tightly couples both the IT and supporting infrastructure facilities into a self-contained and prefabricated unit.

With Vertiv, the cooling and climatic controls, power distribution, and network connectivity will be built in. Other integrated functions, such as physical security, fire suppression, shock absorption, shielding against electromagnetic interference, power conditioning, and uninterruptible power supplies (UPS) or battery, may also be provided.

**WITH VERTIV, YOU CAN EXPECT MICRO DATA CENTERS AND ROOMS THAT ARE:**

- Built with self-contained, pre-tested and integrated infrastructure.
- An all-in-one enclosure to optimize your IT services and next-generation networks.
- Deployed inside a building or a building itself — as you choose.

With our solutions, you have a new way to deploy data center capacity in any space and at any place — making mission critical easy while accelerating time to value without headaches or compromises. Our combination of experience and resources allow us to better adapt to your needs, anticipate what’s next and continue to find solutions in ways other companies simply can’t.
