

To serve the insatiable global demand for connectivity, telecom providers are continuing to expand their networks while looking to cut costs and become better eco-citizens.

Stay on top of energy trends

As the cost of operating and maintaining access sites continues to rise, renewable energy offers a way to minimize the burden. Leveraging solar as the primary or supporting source of energy enables operators to divert precious OPEX dollars towards other critical maintenance functions. Concurrently, they can operate in a manner that reduces their carbon footprint and makes them better corporate citizens.

Adopt integrated energy solutions

Intelligent technologies that minimize the use of expensive energy and enable flexible, yet reliable power delivery are available now. Optimal energy use with high availability requires integrated managed site solutions designed to adapt to the power demands of the network and the local conditions at the site.

- 1 Remote radio heads (RRHs)
- Microwave Repeater
- 3 Solar Array
- 4 NetSure™ Solar Battery Enclosure
- 5 NetSure™ 5100 Hybrid System
- 6 Generator

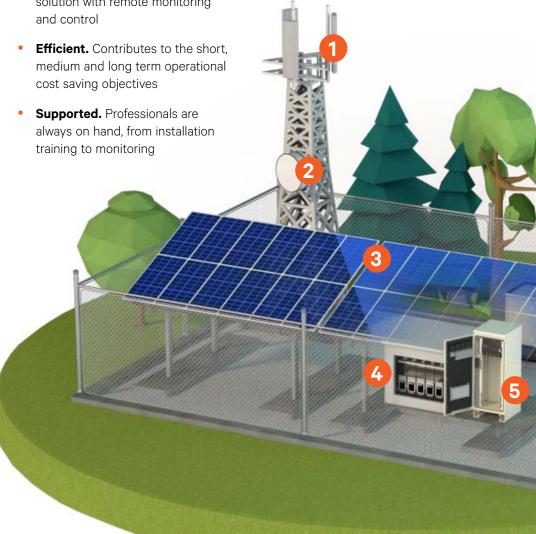

The smart path to success

Vertiv believes the path to profitability involves a fully integrated solar solution that is:

- Simple. Quick and problem free installation resulting from intelligent engineering and design
- Flexible. Meets today's needs while being prepared for the unknown needs of tomorrow
- **Reliable.** Reduces the costs associated with unplanned site visits
- Comprehensive. Delivers a total integrated energy management solution with remote monitoring and control

Leverage an industry expert

In this hyper-connected, technology dependent world, you can't afford for your critical network infrastructure to go down. The success of your business depends on it. Vertiv's team of experts brings together a global reach with local knowledge to take on your most complex challenges, creating solutions that keep your off-grid solar solution running—and your business moving.

Challenges Consequences **Opportunities** Fuel expense is high at off-grid sites due to: Strategically blend power from batteries, solar and other sources to Frequent generator operation substantially reduce the use and storage of fuel High and unpredictable operating cost Theft and quality/dilution Actively manage and monitor battery health, generator operation, and fuel consumption Site accessibility Deployment speed slowed by: Infrastructure not in place · Working with a partner who provides an integrated power and Delayed deployment, enclosure solution Complex supply chains causing consumers to choose competing carriers Managed supply chain with a common objective for schedule and delivery Introduction and understanding of new technologies Operation and maintenance costs impacted by: Engineer the hybrid site solution for the desired balance between capital Improper hybrid dimensioning and operational cost Increase maintenance staff Lack of site visibility post-installation Leverage smart hybrid technologies to minimize maintenance dispatch and achieve maximum ROI, even as operating conditions change Calendar-based maintenance dispatch

Validate vendor focus on the technologies and skills associated with

Keep vendor engaged in site performance post-deployment

deploying complete operating energy solutions

Increase downtime and increase

Use of unplanned funds to keep

maintenance cost

site operational

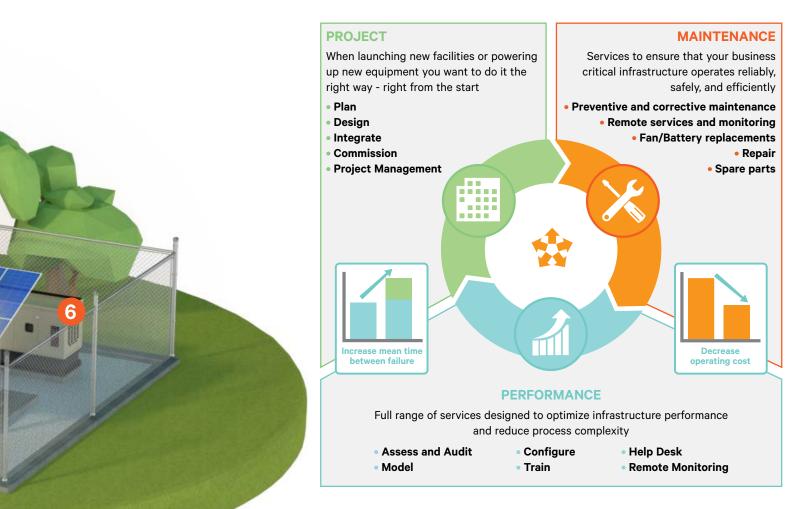

Site reliability impacted by:

for unattended operation

Integration of discrete parts not

validated to work as one solution

Use of consumer system or parts not designed
