How Chilled Water Systems Meet Data Center Availability and Sustainability Goals

Today's chilled water systems reduce direct emissions by limiting the amount of refrigerant used compared to other technologies and enabling the use of new, greener refrigerant types available in the market. These systems also reduce indirect emissions when they adopt new technologies and the system is optimized via best practices regarding system control.

TECHNOLOGY UPDATE

Flexibility means optimum performance.

Liebert® EXM2

The Liebert® EXM2 UPS brings you the perfect mix of raw-based and room-based benefits. The configuration delivers outstanding performance while optimizing costs. Enabling you to honour commitments in service level agreements. State-of-the-art at heart. And never lets you down.

Lithium-Ion
Battery Compatible

- Power Capacity: 100, 120, 160, 200 and 250 kVA/kW
- Maximum efficiency in the Mid-size range: Up to 99% in Eco mode and up to 97% in Dual Conversion mode
- Diverse application scenarios: In-Row, Room and Against-the-wall
- Flexible battery configuration: Lithium-Ion Batteries compatibility & adapts to two wire connection

- Symmetrical Power Factor (0.5 leading to 0.5 lagging)
- Reliability boosters: Robust air channels, PCBs embedded with conformal coating
- Scalable in parallel up to 1.5 MW
- High ambient temperature up to 50 °C with auto-derating above 40 °C

Scale With Confidence.

2022 and Beyond: The Role of 5G Networks

4G and LTE have been very effective for communications over the years, but with 5G networks on their way industries can expect enormous #lowlatency benefits to come. We're talking about a matter of milliseconds to crunch #data. In this #2022andBeyond video series, Vertiv Managing Director for Australia and New Zealand Robert Linsdell unpacks the role of 5G networks in smarter, faster business.
