

VERTIV TO GEIST RACK PDU

Cross Reference Sheet

The purpose of this document is to aid in cross-referencing a Vertiv™ MPH2™ rack PDU to a similar Geist™ rack PDU.

All MPH2 rack PDUs in the table below have monitoring capability, therefore only rack PDUs from Geist that are capable of being remotely monitored are included here. If there is not a similar Geist model shown in the table below, then the user is encouraged to use the Geist PDU finder at <http://www.geistglobal.com/pdu-search> to explore further options.

The additional matching criteria used in the cross-reference table are that the input plug must be of the same type and the input and output voltages must match. An attempt was also made to match the receptacle types and number as closely as possible. Any differences in the receptacle counts are called out in the table. If a receptacle column is green, this means the Geist model has more receptacles of this type and the additional number is shown in the column as a positive number. If a receptacle column is orange, this means the Geist model has fewer of this type of receptacle and the deficit is shown as a negative number.
