APM™ UPS
15-90 kVA/kW
Scalable, Highly Efficient, Row-Based
Power Protection
A Scalable UPS as Dynamic as Your Data Center

Prevent power interruptions and ensure the future flexibility and efficiency of your data center infrastructure, with the Liebert® APM™ UPS. Leverage the innovative modular configuration, cost-efficient operation and flexibility to match increasing power demands all while ensuring critical reliability.

Availability and Flexibility is Enhanced with Standard and Optional Features

Obtain redundancy and scalability using innovative Liebert modular power core assemblies. Each includes distributed intelligence and scalable power in one common module.

This technology allows configuration of a completely redundant power and control system, sized to match the capacity of the protected equipment. When power requirements change, capacity is easily added – without increasing the system footprint.

The Liebert APM UPS scales from 15 to 45kW in a cabinet configuration that includes internal batteries, or from 15 to 90kW in 15kW increments in a configuration that reserves a cabinet for capacity that is paired with an external battery cabinet. This approach allows for right-sizing of the UPS, resulting in improved energy efficiency and reduced power expenditures.

Liebert APM UPS supports dynamic environments and IT growth

Flexibility

- Capacity can be expanded in 15kW increments using modular power core assemblies
- 45kW model includes internal batteries and can also obtain extended run time with external battery cabinets
- 90kW model uses external battery cabinets only
- Easy Installation – front service access, smaller footprint
- 208V, 480V and 600V input configurations
- Matching bypass and distribution cabinet – increase reliability and safety by switching the protected load to bypass power for maintenance and service
- Top or bottom cable entry – enables installation on raised or non-raised floors

The row-based Liebert APM is ideally suited for:

- Small to medium-size data centers
- Server rooms
- Production areas
- Labs and testing facilities
- Telecommunications
- Process control centers
- Edge of the network locations
Resilient and Reliable for Mission Critical Applications

The Liebert® APM™ UPS ensures reliable operation through quality components, intelligent design, and the industry’s largest local support network.

**Higher Availability**

- Minimizes single points of failure
- Redundant Internal power supply
- Distributed controls – each power core assembly includes DSP controls
- Standalone static bypass module – features independent controls in separate assembly to provide higher reliability
- Parallel UPS Systems - configure for redundancy or increased capacity

**Capacity and Agility, On Demand**

With the innovative power modules, capacity deployments can occur rapidly.

*Power core hardware assemblies* enable quick and easy capacity increases.

*Expand for capacity or redundancy in 15kW increments within a single cabinet* – 15kW to 45kW to 90kW.

*Power assemblies* may be added without powering down connected equipment.

*Distributed controls* – Each power core assembly includes DSP controls, minimizing possibility of single point of failure.

*Standalone static bypass module* features independent controls in separate assembly to provide higher reliability.
Efficient Design and Operation Through-out the Lifecycle

**ECONOMICAL AND EFFICIENT – SAVES ON OPERATING AND CAPITAL EXPENSES**

Liebert® APM™ UPS offers excellent efficiency, up to 94% in double conversion and up to 98% in Active Eco-mode. More importantly, with its optimized modular design, high efficiency levels can be obtained with the initial system, instead of purchasing larger capacity systems to anticipate future requirements.

- Low Total Cost of Ownership
- High-efficiency rating (up to 94%), rom 50-100% load
- ENERGY STAR® qualified UPS
- Expand as you need with the flexibility to add capacity as demand increases
- One-year warranty – provides full system coverage

![Efficiencies with and without Eco-Mode](image)

The 90kW Liebert APM UPS at full load has up to 2% efficiency advantage over competitive UPS, saving up to $1800 annually (assuming $0.10 per kW/Hr).

**Dynamic Configurations Enhance Deployment**

**UPS Cabinet**
- One assembly per cabinet may be used for redundancy (up to 30kW + 15kW redundant; up to 75kW + 15kW redundant)

**Battery Cabinet**
- Add runtime for 45 kW system; required for 90 kW system
- Optional Albé® factory integrated battery monitoring for proactive battery management to ensure availability

Intelligence — Where and How You Need It

The Liebert® APM™ UPS provides robust, flexible ancillary features to ensure the system meets your demands.

Simple and Comprehensive Monitoring

The menu-driven control panel on Liebert APM UPS is easy to read and use. Multiple parameters are monitored; data is recorded, stored and easily viewable. Unit metering and status information is displayed in a logical format, and is selectable in multiple languages. The UPS also includes three Liebert IntelliSlot® ports for web-based communications capability:

- Liebert IS-UNITY-DP allows 2 simultaneous 3rd party communication protocols, LIFE™ Services and environmental sensor support
- Liebert IntelliSlot card IS-WEBL allows communication with Liebert Nform™ and web page access
- Liebert IntelliSlot IS-IPBML offers Web Configuration, Telnet and Modbus or BACnet IP for connectivity to a Building Management System
- Liebert IntelliSlot IS-485L offers serial configuration and Modus 485 connection to a Building Management System or Liebert SiteScan®

Enterprise-Quality Batteries Increase Reliability

Battery quality is key to the reliability of the UPS and to the availability of the protected equipment. Liebert APM UPS provides the same reliable battery technology that supports enterprise UPS systems.

- Lower initial cost
- Better service life
- Battery warranty – 3 years full warranty, 7 years pro-rated
- Backed by the largest service organization in the industry
- Optional Albër® battery monitoring ensures battery reliability allowing for proactive management (see page 6 for more information).

Simplified Monitoring with the Unity Communications Card

- Up to 10 Liebert sensors can be wired in series and can report a discrete SNMP trap when their status changes
- Any SNMP monitoring and notification software, such as Liebert Nform can be used
- Monitor temperature, humidity, door open status, leak detection and more

Shown: Optional Albër® integrated battery monitoring
Management and Control Solutions

The UPS includes multiple Liebert communication ports for important connectivity and visibility for rich infrastructure management:

• **The Trellis™ Platform:** Provides robust Data Center Information Management (DCIM) capabilities using selectable modules and suites.

• **Liebert SiteScan™:** Offers centralized monitoring and control of all critical infrastructure systems, using a variety of network protocols.

• **Liebert Nform™:** Enables data center monitoring for any SNMP device that supports a network interface.

• **Third party BMS systems:** integrates seamlessly

Albér® Battery Monitoring Systems:

With a new, easy to use software interface, an Albér factory integrated or stand alone battery monitoring system provides advance warning of pending UPS battery failures, the most common cause of unplanned data center outages.

Utilizing its patented DC resistance testing method, Albér provides real-time system and component level visibility by verifying the state of health of the entire battery system.

View data on parallel battery strings simultaneously

View a trend graph showing the history of all the string level parameters
LIFE™ Services, offered by Vertiv™, provides increased uptime and operational efficiency through continuous monitoring, expert analysis, and proactive response that ultimately helps you optimize the health of the Liebert® APM™ UPS and have peace of mind.

Detailed parametric data is continuously captured with advanced technology embedded in the Liebert APM UPS. The data is transmitted safely and efficiently to an authorized remote service center staffed with system engineers. Should an operating anomaly or alarm condition arise, the engineer performs an immediate analysis and initiates an appropriate response to quickly, safely, and accurately restore to its proper operating condition.

- 24x7 continuous remote monitoring
- Expert analysis and diagnosis
- Quick, safe and accurate response

LIFE Services offers following benefits:

1. **Uptime assurance** delivered by 24x7 monitoring; early detection of trends and operating anomalies that may lead to critical failures if not addressed; and interpretation of alarm and status messages to understand potential impact.

2. **Rapid incident response** delivered by the Liebert APM UPS alarm messages and relevant data automatically transmitted for analysis, trending and diagnosis; remote diagnosis of the equipment while customer engineer is being dispatched to the site; and shipment of parts necessary to perform the corrective maintenance.

3. **Increased insight and ease of management** delivered by notification of operating conditions that may impact the health of the Liebert APM UPS; explanation of critical system health with trend and analysis reports delivered quarterly; and integration of services from remote detection of critical and anomaly conditions through on-site response to restore the critical system.

Maximizing the performance and efficiency of your data center’s uninterruptible power supply (UPS) and other power distribution systems requires systems be properly maintained by factory-trained technicians. Trust Vertiv Services to take your critical maintenance to the next level — proactive maintenance that can significantly extend the life of your power systems, decrease your capital investment, optimize system efficiency and effectiveness, and increase overall system availability.
